1. Introduction

This document is for the users of YB Currency Converter—an application where the user can do the currency conversion. The system is operated as a command-line interface (CLI) application. The user can leave it running and use it as required, for example, a customer arrives to do the exchange.

2. Setup

To set up the application, seek help from the support team. If the user prefers to do the setup personally, it can be done so by following the steps in the sections below.

2.1. Prerequisites

The machine should have Python installed. Any recent Python version will do.

2.2. Running on Mac

To run the application on Mac, go to the folder of the application—where the script files reside, and double click on `ybcc_mac.command` or run the following command if it is preferable to run it from command prompt.

```
./ybcc_mac.command
```

If there is any issue which stops the application from running for any reason, run the command below to grant the required instruction.

```
chmod +x ybcc_mac.command
```

2.3. Running on Windows

To run the application on Windows, go to the folder of the application—where the script files reside, and double click on **ybcc_windows.bat** or run the following command if it is preferable to run it from command prompt.

```
ybcc_windows
```

2. Usage

The application is intended to be used by a single user who sits at the counter of an exchange rate bureau and serves the customers. The screen can be shared to the customers so that the customers will be informed about the exchange rates as well.

User Document 1.0.0	Documented by Zaw Min Tun

After setting up and having the application ready as described in the previous section, then the user should be able to run the application already. When the application starts, the user will see the screen as shown below.

```

--- Supported Currencies ---
1. NZD (New Zealand Dollar)
2. MMK (Myanmar Kyat)
3. USD (United States Dollar)

--- Exchange Rates ---
1. NZD to MMK: 2000.0 (GlobalMarket)
2. NZD to USD: 0.61 (GlobalMarket)
3. MMK to NZD: 0.00052 (GlobalMarket)
4. MMK to USD: 0.000248 (GlobalMarket)
5. USD to NZD: 1.65 (GlobalMarket)
6. USD to MMK: 4800.0 (Myanmar Plaza)

-----
Enter conversion details (or type 'q' to quit)
Base Currency Code (e.g., NZD): █

```

Figure 1. Staring the YB Currency Converter

Then the user can give the base or source currency code. Then the application asks for the target currency code and the user can give the target currency code. Then the application asks for the amount of the base currency to exchange. After providing the amount and pressing ENTER key, the application gives the required information—the equivalent amount in the target currency.

```

--- Supported Currencies ---
1. NZD (New Zealand Dollar)
2. MMK (Myanmar Kyat)
3. USD (United States Dollar)

--- Exchange Rates ---
1. NZD to MMK: 2000.0 (GlobalMarket)
2. NZD to USD: 0.61 (GlobalMarket)
3. MMK to NZD: 0.00052 (GlobalMarket)
4. MMK to USD: 0.000248 (GlobalMarket)
5. USD to NZD: 1.65 (GlobalMarket)
6. USD to MMK: 4800.0 (Myanmar Plaza)

-----
Enter conversion details (or type 'q' to quit)
Base Currency Code (e.g., NZD): nzd
Target Currency Code (e.g., MMK): usd
Amount to convert: 150

>> RESULT: 150.00 NZD = 91.50 USD

Press Enter to continue... █

```
